Built on reputation.

When uninterrupted fuel or power matters most, Mansfield Group delivers reliability, compliance and peace of mind.

From fuel services to diesel generators, we provide, install and maintain your fuel systems: compliant, dependable, and done right. Clients trust us because we show up, solve problems, and never cut corners.

When continuity of fuel and power is critical, we're the team that keeps fuel flowing and the lights on.

"Mansfield own the site and they own the outcome. That's why we trust them to deliver."

Kelvin Burch
Fuel Manager
KiwiRail

OUR PEOPLE

Committed to deliver.

As a family-owned business, we back each other, take pride in our work, and build lasting relationships with the clients who rely on us.

20m

20 million litres of fuel volume per year

60+

Years experience

HSNO

Certified installers

60 years of experience across major industries.

We work alongside project managers and site teams to deliver fuel and power systems that are installed smoothly, stay compliant, and perform reliably.

With over 60 years of experience working across industries, we know how to reduce the project pressure.

Our small, capable team keeps communication tight and timelines realistic so that we can spot and resolve problems early, manage subcontractors directly, and make sure the install is done right the first time.

We understand the pace and complexity of large organisations, and we work to keep things simple — no crossed wires, no drawn-out sign-offs, and no chasing for updates. For smaller installs and maintenance like on-site oil and fuel tanks, we plan around tight spaces and ensure full compliance, so that your space is safe.

Fuel Retail and Petroleum Operators

End-to-end site services for major and independent fuel operators from tank replacements, full site install, and drainage.

Government & Public Sector

Delivering compliant, reliable fuel and power solutions tailored for high compliance public sector environments.

Healthcare Facilities Management

Fuel and backup power systems that support healthcare operations.

Transport & Infrastructure

Supporting national operations with safe, compliant fuel and backup power systems.

Telecommunications

Reliable fuel and power systems for continuous network performance and compliance.

Agriculture

Complete installation, maintenance and certification for fuel and underground solvent storage.

Private Facilities Management

Compliant installations for apartments, office blocks, and shared infrastructure environments.

Mechanical

Complete installation, maintenance and certification for oil tanks.

Petroleum services, done right.

From tanks to total installs, we make petroleum projects easy for project and site managers by staying hands-on, proactive and accountable.

Petroleum is high-stakes work and Mansfield knows how to get it done right. Whether you're installing a new tank or upgrading a non-compliant site, we take the complexity off your plate.

You'll deal directly with the people doing the work, the same team from planning through to final sign-off.

We handle subcontractors, compliance, site constraints, and problem-solving — so the project manager doesn't have to. Our team is our strength: we're responsive, practical, and take ownership. We don't cut corners, we don't disappear mid-job, and we don't leave loose ends.

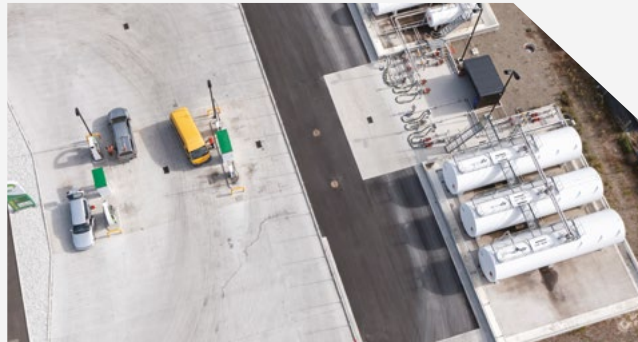

We deliver petroleum services you can rely on.

"They knew the site inside out. I could rely on them to take ownership."

David Green
Project Manager, Rolling Stock
KiwiRail

How we help with your petroleum project.

End-to-end design, installation, certification and maintenance of petroleum sites, delivering compliance, safety and reliability from the ground up. See our petroleum services below.

Design & Construction

Robust and reliable fuel systems that work, and built to your site's constraints. Working closely with engineers, we innovate and deliver solutions that keeps your fuel flowing.

Project Management

Expect nothing less than total oversight and clear communication. We manage every detail — timelines, budgets, and stakeholders — to deliver efficient, stress-free projects completed exactly as promised.

Tank Installation

Tanks are installed with precision and care, ensuring safety, compliance, and minimal disruption. Our approach delivers uninterrupted fuel supply and peace of mind from day one.

Service & Maintenance

Proactive maintenance, and fast response times keep your systems compliant, efficient, and fully operational. We'll be on deck when you need us.

Testing

From ultrasonic checks to pressure tests, we ensure your tank is structurally sound, compliant, and built to last — with minimal downtime.

KiwiRail Case Study

A fuel facility upgrade at Middleton Fuel Depot in Christchurch.

Snapshot:

Location: Middleton Depot, Christchurch

Project Length: 2 Years

Outcome: 200,000L fuel handled per week

Hands-on delivery of petroleum services from a trusted partner.

Challenge

What began as a small AdBlue installation to support new low-emission DM locomotives, evolved into a fuel facility upgrade at Middleton Fuel Depot in Christchurch, a critical refuelling hub for KiwiRail servicing the South Island.

David Green, Project Manager at KiwiRail, was tasked with delivering a major infrastructure project on a constrained site, while minimising disruptions to 24/7 rail operations.

Solution

Mansfield Group was engaged by KiwiRail for their technical know-how, deep site knowledge, and strong working relationship with the depot team. They managed all aspects of the build: coordinating subcontractors, installing diesel and AdBlue tanks, laying new stainless-steel pipework, and helping the team to obtain full compliance.

As project manager, David didn't feel the need to micromanage the project. The Mansfield team had the experience to get the job done properly across everyone involved.

"They were fair, reasonable, and knew the site inside out," he said. "I could rely on them to take ownership."

Outcome

Even when a tank required remedial work from a manufacturing fault that required the diesel tanks to be removed and reinstalled, Mansfield managed the process without delays. Pricing remained transparent throughout, and changes were agreed collaboratively, phase by phase.

The outcome: a fully certified, high-quality fuel facility that performs now, and for years to come. KiwiRail's project was delivered under budget and to the high standard expected of a national transport company.

"They were fair, reasonable, and knew the site inside out. I could rely on them to take ownership."

Diesel generators you can rely on.

When backup power can't fail, Mansfield delivers. We install and service diesel generators with care, keeping business running and the lights on without disruption.

Mansfield's diesel generator services are built to keep you steady when the grid goes down. We handle installs, compliance, servicing, and maintenance. Our strength is in how we work: small, direct, and accountable.

You deal with the same team from planning through to handover, and we stay close to the job the entire way. Whether it's a tight site, a tricky schedule, or compliance complexity, we can take it off your hands and make it work. Mansfield keeps your generators ready when it matters — and running when it counts.

How we help with your diesel project.

We design, install, certify and maintain fuel systems for diesel generators, ensuring compliance and keeping your site powered when it matters most. See our services below.

Design & Specification

When you need site-specific generator systems, we can support the right solution for your needs, your budget, and your regulatory requirements.

Custom Fitouts & Site-Specific Adaptations

Have an awkward site? No two sites are the same. We tailor installations around space, noise, access, and safety constraints.

Project Management

No need to juggle multiple contractors and timelines. We've got your project covered, including generator systems and installs, coordinating trades, ensuring smooth on-time delivery.

Auditing & Compliance Checks

From airflow and acoustics to exhaust safety, we'll ensure your setup meets all requirements — and functions exactly as it should.

Ongoing Maintenance Services

Expertise and tech go a long way to keeping your generator ready. We have the capability for ultrasonic checks to pressure tests to ensure your tank is structurally sound, compliant, and built to last.

Downer Group Case Study

Reliable backup power for a national telco provider.

Delivering reliable diesel systems for Downer Group's projects.

Challenge

To Downer, Mansfield Group was more than a contractor. They were a reliable partner. Trusted to handle the details and deliver under pressure, Mansfield was there at every turn, making sure the project was delivered to the meticulous standard required.

As part of Downer's national infrastructure responsibilities for a nationwide telco provider, Project Manager of Energies and Utilities, Dan Marson, oversees multiple critical sites, often in challenging locations, requiring diesel backup power.

With this particular project, there were tight timeframes and a zero tolerance for compliance issues or operational delays. Dan needed a trusted generator partner who could deliver across multiple complex scopes, including fuel systems and installation.

Solution

Mansfield Group became Downer's contractor for diesel generator systems. The ability to integrate seamlessly into larger site programmes, alongside electrical and civil contractors, proved invaluable.

During the project, Mansfield's team worked to tight delivery schedules and met meticulous detail requirements, collaborating closely with Dan throughout, from planning and pricing to on-site delivery.

Outcome

Mansfield's hands-on approach and collaboration have earned long-term trust with Dan and the team at Downer.

As a result, the backup power project ran to schedule, with work delivered at a high standard.

"Frank and the team just made it happen. They got it done, and they got it done right."
